Strength of Unity In War Work

(By Evangeline Booth)
Commander of the Salvation Army

There is one task and only one for war relief organizations to perform at the front. It is the task of uniting in every possible way the hardworking and sometimes the untrained, but enthusiastic, in those fighting lines. To such a task, it is the Salvation Army's duty to do all that thinking and doing which will do the things that are necessary for the salvation of souls, to dedicate their hearts, their hands, their heads, and their lives. If they cannot go into the front, they must give their money, their work, and if they cannot, they must give their prayers. The Salvation Army is a spiritual army, and it is the duty of every member to do the things that are necessary for the salvation of souls. It is the duty of every member to do the things that are necessary for the salvation of souls. It is the duty of every member to do the things that are necessary for the salvation of souls.

MOLINE UNIVERSAL MAKES Wonderful Record at National Tractor Exhibition

Develops 20 H. P. on the draw bar and we only rate it at 9 H. P. Think of it!

Officially Accredited With 26.48 H. P. at the belt—We rate it at 18 H. P.

In previous advertising we have stated that the Moline Universal was conservatively rated at 9-18 h. p. Just how conservative is shown by the astonishing official test made at the National Tractor Demonstration at Satus, Kas., which showed the Moline Universal to have an excess of over 11 h. p. on the draw bar and 8 h. p. at the belt, a total of 20 h. p. on the draw bar and 26 h. p. on the belt.

Certainly these tests show beyond question of doubt the efficiency of the Moline Universal. At each 160 lbs. of weight the Moline Universal developed 1 h. p. on the draw bar. Compute this with the ordinary tractor which develops 1 h. p. for each 250 to 300 lbs. weight and you will clearly realize the greater efficiency and corresponding greater economy of the Moline Universal.

However, we shall continue to rate the Moline Universal at 9-18 h. p. A tractor to give satisfactory service and stand up for years under the strain of tractor work must have reserve power, and the greater the reserve the better. Under normal conditions the Moline Universal has from 30 to 100 per cent reserve power. Think what this means.

Ninety-eight per cent of its entire

weight is on the two big drive wheels where every ounce is available for traction. The Moline Universal is scientifically constructed and utilizes its weight to best advantage. It has no dead weight.

From the above report you will see that the Moline Universal developed 20.48 h. p. at 9.52 h. p. h. putting two plow bottoms 9 to 10 in. deep in exceptionally hard plowing. At 2.18 h. p. h. it developed 12.0 h. p. The difference in speed accounts for the extra draw bar pull. At 4.5 h. p. h. under average conditions the Moline Universal will plow as much in a day as a 4-plow tractor traveling at 2.25 h. p. h.

Just the Right Size

If the Moline Universal were built to pull a 4-bottom plow, it would be too heavy for light work. As the Moline Universal is now built it has ample capacity for all ordinary plowing needs, and at the same time is equally suited for light operations such as cultivating, harrowing, mowing, etc., which require far more work hours than your heavy work.

You are ably connected in getting your work done quicker and better than you ever did before. You have no fixed power requirements. One day your work

may be heavy, the next day light—and the light work is just as important as the heavy. Thus, you must have a tractor which will do both heavy and light work efficiently and economically, and the Moline Universal fully meets both these requirements. You have plenty of power when you need it and when you don't want it you have no extra expense—as you would have with a heavy tractor for light jobs.

Remember this—here's what the Moline Universal Tractor will do for you:

- (1) Gives you plenty of power for all your work, both heavy and light.
- (2) It does all farm work including cultivating.
- (3) One man operates both tractor and implement from the seat of the implement in all operations.
- (4) Electric lights enable it to be worked nights to make up for unavoidable delays.
- (5) Because of self-starter, non-robust labor can operate tractor successfully.
- (6) So well made and has so much reserve power that it will give many years of service.
